Platinum Modbus Interface

1 Introduction

1.1 Purpose

The following document defines the Modbus protocol support and register mapping used by the Platinum product family.

The Modbus interface is available on all communication channels and support is provided for MODBUS/ASCII, MODBUS/RTU and MODBUS/TCP/IP transactions.

1.2 Definition of Terms and Acronyms

I2C	2 wire serial interface
Base Device	Device connected to slave device
Smart Input	Device supporting 1 or more Input sensors
Smart Output	Device supporting 1 or more Output Elements
Sensor Element	One of the physical sensing elements on a Smart Output
AC	Alternating Current
DC	Direct Current
CS	Chip Select
ADC	Analog to Digital Converter
DAC	Digital to Analog Converter
RS485	Electrical signals used for serial communications
RS232	Electrical signals used for serial communications
CSV	Comma Separated Values
COTS	Commercially-Off-The-Shelf
ESD	Electro Static Discharge
FW	Firmware
HW	Hardware
I/O	Input/Output
LED	Light Emitting Diode
Hexadecimal	Values expressed using base 16 (2 ⁴)

Platinum Modbus Interface

1.3 Applicable Documents

Doc. #	Name / Description	Rev. #

	Platinum Ramp and Soak Processing	0.0.1
	MODBUS APPLICATION PROTOCOL SPECIFICATION	V1.1b3
	Device Serialization and Version Information	Rev 0.1
	Omega Engineering Coding Standard	Rev 1.2.0

Platinum Modbus Interface

2 Modbus Interface

The Modbus interface is fully described in MODBUS APPLICATION PROTOCOL SPECIFICATION (V1.1b3).

The Modbus specification allows accessing to up 65535 internal 'holding' registers using register READ, register WRITE and WRITE MULTIPLE commands. Each Modbus holding register is defined as a 16 bit entity structured as BIG ENDIAN values (most significant byte always presented first).

The Platinum Modbus interface provides access to the internal database of the Platinum product family by internally mapping Modbus holding registers to specific database items.

Modbus is structured using a MASTER-SLAVE topology, in which there is one MASTER device and up to 255 slave devices. All transactions are initiated by the MASTER device.

Modbus slave devices are individually accessed using a one byte SLAVE address. The MASTER device initiates a transaction by sending a request packet to a specific slave. The SLAVE device processes the transaction and returns either response packet indicating success or failure.

Address 0 is reserved as a 'broadcast' address, in which all slave devices will accept and process the transaction but will not send a response.

2.1 Modbus Functions

The Platinum Modbus interface supports the following Modbus FUNCTION requests.

Function Code	Mnemonic	Description
0x03	Read Holding Register	Reads one or more consecutive 16 bit holding registers
0x06	Write Single Register	Writes a specific 16 bit holding register
0x07	Read Exception status	Reads structured status information
0x08	Diagnostic	Read/Write diagnostic information
0x10	Write Multiple Registers	Write one or more consecutive 16 bit holding registers
0x0b	Get Comm events	Read communication event counters

2.2 Data Formats

Modbus holding registers are represented as 16 bit entities. The following encoding is used for extended data items. Note that 'byte 0' will be the first byte received/transmitted.

For data types that can be represented in 16 bit (Boolean, byte, char, int16 and uint16) a single register is used.

For data types that require 32 bits two consecutive registers are used. The lower number register will represent the most significant data. The 2nd register represents the least significant data.

2.2.1 Multiple Register Reads

When reading a dual register entity the lower order register should be used as the requested 'holding register', with a request for a minimum of 2 registers. Internally the entire entity is read and data is then built into a response packet.

The access can be split into 2 consecutive single register reads. When the lower (base) register is accessed the entire 32 bit entity is read and the two most significant bytes are returned. The following

Platinum Modbus Interface

single register read must specify the next consecutive register address. The two least significant bytes of the internally buffered data used in the response.

Attempts to access the two least significant bytes without first reading the two most significant bytes will result in an error response.

2.2.2 Multiple Register Writes

When writing a dual register entity the lower order register should be used as the requested 'holding register', with a request for minimum of 2 registers. The write data is internally buffered and transferred to the database entry as a 32 bit value.

The access can be split into 2 consecutive single register writes. When the lower (base) register is written the 16 bit entity is internally buffered BUT NO DATA TRANSFER IS MADE TO THE DATABASE. The following single register write must specify the next consecutive register address. The two least significant bytes of the write request are combined with the previous write data and the entire 32 bit entity is written to the database.

Attempts to write the two least significant bytes without first writing the two most significant bytes will result in an error response.

Data Types	Number of Registers	Byte				Description
		0	1	2	3	
Boolean	1	--	LSB	N/A		Zero = OFF, non-zero = ON
Byte, Char	1	--	LSB			Entity contained in LSB of register, Byte 0 ignored.
Int16, uint16	1	MSB	LSB			Entity contained in MSB/LSB of register.
		0	1	2	3	(dual register data)
Int32, uint32	2	MSB	B-1	B-2	LSB	Requires 2 consecutive registers, MSB transferred first
float	2	Sign+ Exp	Mantisa MSB	B-1	Mantisa LSB	IEEE formatted value contained in 2 consecutive register

2.2.3 Request Packet Sizes

Multiple consecutive registers may be accessed in a single transaction.

The Platinum Modbus interface imposes a maximum of 64 bytes for the total transaction. Allowing for the required framing, addressing and integrity checks results in the following data size restrictions using the READ and WRITE MULTIPLE functions.

Format	Protocol Overhead	Maximum Read data	Maximum Write data
ASCII	16	12 Registers	12 Registers
RTU	8	23 Registers	23 Registers
TCP/IP	8	23 Registers	23 Registers

Platinum Modbus Interface

2.2.4 Modbus USB Support

The Modbus specification supports RS232 and RS485 serial data. For ASCII formatted packets a USB virtual comm channel provides full support since the framing information is specified by unique characters (SOF = ':', EOF = CR/LF).

For RTU formatted packets the Modbus requires specific inter-frame character timing to determine the framing of each transaction. This information is not available using a generic virtual comm channel across USB, which will typically collect 'serial' data into 64 byte packets for transmission, as determined by the USB end-point buffer size. The USB Modbus RTU interface relies on the USB channel collecting data into 64 byte packets.

Platinum Modbus Interface

3 Platinum Modbus Register Assignments

All accesses to the Platinum database information is made thru the following Modbus registers.

Mnemonic entries marked with '*' are identical to those used by the Platinum LOAD and SAVE file formats.

Mnemonic entries marked with '**' are identical to those used by the Platinum LOAD and SAVE file formats but are referenced in LOAD and FILE data are made using meta characters (%).

Data types are:

R – single 16 bit register (may be Boolean, byte, char, int16 or uint16 data)

L – dual (32 bit) register (may be int32 or uint32 data)

F – IEEE Floating point value

All data is transferred using Big Endian formatting, where the most significant byte is transmitted first.

Index	Mnemonic	Type	Description
0x0200	DEVICE_ID**	L	Device Identifier
0x0202	VERSION_NUMBER**	L	
0x0204	SYSTEM_STATUS	L	
0x0210	CURRENT_INPUT_VALUE	F	
0x0212	REMOTE_SENSOR_VALUE	F	Internal Use Only
0x0214	REMOTE_SETPOINT_VALUE	F	
0x021e	INPUT_DIGITAL	R	State of digital input pin
0x0224	CONTROL_SETPOINT	F	Setpoint used in PID calculations
0x0226	PEAK_VALUE	F	Maximum Value processed
0x0228	VALLEY_VALUE	F	Minimum Value processed
0x022a	PID_OUTPUT	F	PID Output level (0..100%)
0x022c	CURRENT_INPUT_VALID	R	Flag indicating process value is valid
0x022d	ALARM_STATE	L	
0x022e	RAMP_SOAK_STATE	R	Enumerated value - R&S state
0x0230	OUTPUT_1_STATE	R	Flag indicating state of Output (0/1)
0x0231	OUTPUT_2_STATE	R	Flag indicating state of Output (0/1)
0x0232	OUTPUT_3_STATE	R	Flag indicating state of Output (0/1)
0x0233	OUTPUT_4_STATE	R	Flag indicating state of Output (0/1)
0x0234	DISPLAY_ALARM_CONTROL	R	
0x0240	RUN_MODE	R	Enumerated value – system running state
0x0241	FACTORY_RESET	R	Write 1 to force reset to factory defaults
0x0242	LATCH_RESET	R	Write 1 to reset latched alarms
0x0243	PID_AUTOTUNE_START	R	Write 1 to force Autotuning to start
0x0244	PID_AUTOTUNE_DONE	R	Internal use only

Platinum Modbus Interface

0x0248	READING_DECIMAL_POSITION*	R	Enumerated value – number of dec. points
0x0249	DISPLAY_UNITS*	R	Enumerated value – units of measure
0x024a	DISPLAY_COLOR_NORMAL*	R	Enumerated value to set display color
0x024b	DISPLAY_BRIGHTNESS*	R	Enumerated value to set display brightness
0x024c	TIME_FORMAT*	R	Enumerated value to indicate time format
0x0250	TCAL_TYPE*	R	Enumerated value indicating type of TCAL
0x0251	SET_ICE_POINT	R	Write 1 to set ICE POINT offset
0x0252	SET_TCAL_1_POINT	R	Write 1 to set 1 point Cal. offset
0x0253	SET_TCAL_2_POINT_LOW	R	Write 1 to set 2 point Cal. LOW point
0x0254	SET_TCAL_2_POINT_HIGH	R	Write 1 to set 2 point Cal. HIGH point
0x0258	TCAL_ICE_POINT_OFFSET*	F	Stored ICE POINT offset
0x025a	TCAL_1_POINT_OFFSET*	F	Stored 1 point CAL offset
0x025c	TCAL_2_POINT_OFFSET*	F	Stored 2 point CAL offset
0x025e	TCAL_2_POINT_GAIN*	F	Stored 2 point CAL gain
0x0260	RAMP_SOAK_MODE*	R	Enumerated – Ramp and Soak mode
0x0261	RAMP_SOAK_PROFILE_SELECT*	R	Starting Profile for Ramp and Soak
0x0262	CURRENT_PROFILE	R	Use to select R&S profile to access
0x0263	CURRENT_SEGMENT	R	Use to select profile segment to access
0x0264	SEGMENTS_PER_PROFILE*	R	Number of segments in current profile
0x0265	SOAK_ACTION*	R	Enumerated – Soak Action
0x0266	SOAK_LINK*	R	Profile to link to after current profile
0x0267	TRACKING_TYPE*	R	Enumerated – R&S tracking type
0x0268	RAMP_EVENT*	R	RE.ON flag set for current segment
0x0269	SOAK_EVENT*	R	SE.ON flag set for current segment
0x026a	SOAK_PROCESS_VALUE*	F	Target SOAK setpoint for current segment
0x026c	RAMP_TIME*	L	Time (msec) to reach target SOAK setpoint
0x026e	SOAK_TIME*	L	Time (msec) to hold at SOAK setpoint
0x0270	CONTROL_SETPOINT	F	Setpoint used for PID/Control functions
0x0272	RAMP_SOAK_REMAINING_TIME	L	Ramp or Soak time remaining
0x0274	RAMP_SOAK_STATE	R	Enumerated – R&S flags
0x0280	CURRENT_INPUT_VALUE	F	Current Process value

Platinum Modbus Interface

0x0282	INPUT_SENSOR*	R	Enumerated sensor (input) type
0x0283	TC_TYPE*	R	Enumerated Thermocouple type
0x0284	RTD_WIRE*	R	Enumerated RTD wire type
0x0285	RTD_ACRV_OHM_TYPE*	R	Enumerated RTD Curve
0x0286	THERMISTOR_VALUE*	R	Enumerated Thermistor type
0x0287	PROCESS_RANGE*	R	Enumerated process input range
0x028f	READING_FILTER_CONSTANT*	R	Enumerated input filtering constant
0x02a0	PID_ADAPTIVE_CONTROL_ENABLE*	R	Enumerated Toggle
0x02a1	PID_ACTION*	R	Enumerated PID control action
0x02a2	PID_AUTOTUNE_TIMEOUT*	L	Timeout (msec) for autotuning
0x02a4	PID_P_*	F	Proportional Gain value
0x02a6	PID_I_*	F	Integral Gain value
0x02a8	PID_D_*	F	Derivative Gain value
0x02aa	PID_PERCENT_LOW*	F	Minimum PID Control output value
0x02ac	PID_PERCENT_HIGH*	F	Maximum PID Control output value
0x02ae	PID_MAX_RATE*	F	PID maximum rate of change
0x02b0	PID_STABILITY_TIMEOUT*	L	Autotune stability test timeout
0x02b2	PID_STABILITY_RATE*	F	Autotune maximum rate of change stabilitytest
0x02c0	SAFETY_DELAYED_POWER_ON_RUN*	R	Write 1 to DISABLE auto RUN on power up
0x02c1	SAFETY_DELAYED_OPER_RUN*	R	Write 1 to DISABLE return to RUN in OPER
0x02c2	SAFETY_SETPOINT_LIMIT_LOW*	F	Minimum allowed setpoint value
0x02c4	SAFETY_SETPOINT_LIMIT_HIGH*	F	Maximum allowed setpoint value
0x02c6	LOOP_BREAK_ENABLE*	R	Enumerated Toggle
0x02c8	LOOP_BREAK_TIME*	L	Time (msec) for break test
0x02ca	OPEN_CIRCUIT_ENABLE*	R	Write 1 to enable open circuit test
0x02d0	PASSWORD_INIT_ENABLE*	R	Write 1 to enable INIT menu password
0x02d2	PASSWORD_INIT*	L	INIT menu password
0x02d4	PASSWORD_PROGRAM_ENABLE*	R	Write 1 to enable PROG menu password
0x02d6	PASSWORD_PROGRAM*	L	PROG menu password

0x06de	SIM_AUX_INPUT_C3*	F	

3.1 Enumerated Values

The following define the Enumerated values.

3.1.1 Control/System Parameters

Toggle		
0	DISABLE	Feature or option is disabled
1	ENABLE	Feature or option is enabled

Control		
0	STOP	Control is stopped
1	START	Control is started
2	CANCEL	Control is cancelled

Platinum Modbus Interface

3	AUTO_ON	Control is immediated started
4	CONTINUOUS	Control is continuously (repeatedly) enabled

Control Action		
0	ACTION_REVERSE	Output active if P.V. < Setpoint
1	ACTION_DIRECT	Output active if P.V. > Setpoint

System State		
0	LOAD	File transfer in progress
1	IDLE	Idle, no control
2	INPUT_ADJUST	Adjusting input value
3	CONTROL_ADJUST	Adjusting output value
4	MODIFY	Modify parameter in OPER mode
5	WAIT	Waiting for RUN condition
6	STANDBY	Standby mode
7	STOP	Stopped mode
8	PAUSE	Paused mode
9	FAULT	Fault detected
10	SHUTDOWN	Shutdown condition detected
11	AUTOTUNE	Autotune in progress

3.1.2 Simulator Parameters

Simulation Mode		
0	STOPPED	Simulator is stopped
1	PAUSED	Simulator is paused
2	TRIANGLE	Triangle output
3	SAW	Sawtooth output

Platinum Modbus Interface

4	INVERTED	Inverted Sawtooth output
5	PLANT	Simulated Plant

3.1.3 Display & Formatting

Time Format		
0	MINUTE_SECOND	MM.SS displayed
1	HOUR_MINUTE	HH.MM displayed
2	MILLISECONDS	S.MMM displayed

Decimal Point		
0	DECIMAL_POINT_NONE	Display as XXXX
1	DECIMAL_POINT_3	Display as XXX.X
2	DECIMAL_POINT_2	Display as XX.XX
3	DECIMAL_POINT_1	Display as X.XXX

Units		
0	UNIT_NONE	No units applied
1	UNIT_CELCIUS	Values converted to oC
2	UNIT_FARENHEIT	Values converted to oF

Color		
0	COLOR_OFF	No color
1	COLOR_GREEN	GREEN
2	COLOR_RED	RED
3	COLOR_AMBER	AMBER
4	COLOR_NO_CHANGE	Do not change color (internal use)

Brightness

Platinum Modbus Interface

0	BRIGHTNESS_LOW	
1	BRIGHTNESS_MEDIUM	
2	BRIGHTNESS_HIGH	

3.1.4 Ramp and Soak Parameters

Ramp & Soak State (bit mapped)		
0x00	INACTIVE	Ramp & Soak is inactive
0x01	RAMPING	Ramp time and RE bit set
0x02	SOAKING	Soak time and SE bit set
0x04	RAMP_ACTIVE	Ramp time
0x08	SOAK_ACTIVE	Soak time
0x10	RAMP_SOAK_PAUSED	Ramp & Soak is in PAUSE condition
0x80	RAMP_SOAK_ERROR	Ramp & Soak error condition

Ramp & Soak Tracking		
0	FIXED_RAMP	Fixed RAMP time
1	FIXED_SOAK	Fixed SOAK time
2	FIXED_CYCLE	Fixed CYCLE time

Ramp & Soak Link Action		
0	STOP_PROCESS	Stop at end of profile
1	HOLD_PROCESS	Hold last SOAK level at end of profile
2	LINK_PROFILE	Link to Profile defined in LINK field

Ramp & Soak Control		
0	RAMP_SOAK_DISABLED	Disabled
1	RAMP_SOAK_ENABLED	Enabled by RUN button

Platinum Modbus Interface

2	RAMP_SOAK_REMOTE	Enabled by RUN button or Digital Input
---	------------------	----------------------------------------

3.1.5 Input Parameters

Sensor Type		
0	SENSOR_TC	Thermocouple
1	SENSOR_RTD	RTD
2	SENSOR_PROCESS	Process Input
3	SENSOR_THERMISTOR	Thermistor
4	SENSOR_REMOTE	Remote

Thermocouple Types			
0	J	6	R
1	K	7	S
2	T	8	B
3	E	9	C
4	N	10	<RESERVED>
5	<RESERVED>	11	<RESERVED>

RTD ACRV OHM Types		
0	385_100	385 Curve, 100 ohms
1	385_500	385 Curve, 500 ohms
2	385_1000	385 Curve, 1000 ohms
3	392_100	392 Curve, 100 ohms
4	3916_100	3916Curve, 100 ohms

RTD Wire types		
0	2_WIRE	

Platinum Modbus Interface

1	3_WIRE	
2	4_WIRE	

Thermistor Type		
0	THERMISTOR_2_25_K	2.25 K
1	THERMISTOR_5_K	5K
2	THERMISTOR_10_K	10K

Process Input Types		
0	PROCESS_4_20	4 – 20 mA
1	PROCESS_0_24	0 – 24 mA
2	PROCESS_0_10	0 – 10 Vdc
3	PROCESS_0_1	0 – 1.0 Vdc
2	PROCESS_0_POINT_1	0 – 0.1 Vdc
5	PROCESS_PLUS_MINUS_1	+/- 10 Vdc
6	PROCESS_PLUS_MINUS_10	+/- 1.0 Vdc
7	PROCESS_PLUS_MINUS_POINT_1	+/- 0.1 Vdc

Process Live_Manual mode		
0	LIVE_MODE	
1	MANUAL_MODE	

Input Filtering		
0	FILTER_CONSTANT_1	No filtering (1 X rate)
1	FILTER_CONSTANT_2	X 2 filtering
2	FILTER_CONSTANT_4	X 4 filtering
3	FILTER_CONSTANT_8	X 8 filtering

Platinum Modbus Interface

4	FILTER_CONSTANT_16	X 16 filtering
5	FILTER_CONSTANT_32	X 32 filtering
6	FILTER_CONSTANT_64	X 64 filtering
7	FILTER_CONSTANT_128	X 128 filtering

3.1.6 Setpoint Parameters

Setpoint Modes		
0	SETPOINT_ABSOLUTE	Setpoint value given as fixed constant
1	SETPOINT_DEVIATION	Setpoint value is deviation (+/-) Setpoint 1 value
2	SETPOINT_REMOTE	Setpoint 1 set by Remote Setpoint
3	SETPOINT_EXTERNAL	Setpoint value set externally
4	SETPOINT_RAMP_SOAK	Setpoint value set by Ramp & Soak process

3.1.7 Alarm Parameters

Alarm Mode		
0	ALARM_ABSOLUTE	Alarm setpoint is fixed constant
1	ALARM_DEVIATION_1	Alarm is offset from Setpoint 1
2	ALARM_DEVIATION_2	Alarm is offset from Setpoint 2

Alarm Type		
0	ALARM_DISABLED	Alarm not active
1	ALARM_ABOVE	Alarm triggered if PV > ALM.H
2	ALARM_BELOW	Alarm trigger if PV < ALM.L
3	ALARM_HI_LO	Alarm trigger if PV > ALM.H or PV < ALM.L
4	ALARM_BAND	Alarm trigger if PV > ALM.L and PV < ALM.H

Alarm Latch Control

Platinum Modbus Interface

0	ALARM_UNLATCH	Alarm does not latch
1	ALARM_LATCH	Alarm state will be latched, clear by front panel
2	ALARM_LATCH_REMOTE	Alarm state will be latched, clear by digital input
3	ALARM_HI_LO	Alarm state latched, clear by front panel or input

3.1.8 Output Parameters

Output Types		
0x00	OUTPUT_NONE	No output available
0x01	OUTPUT_STR	Single Poll Relay
0x02	OUTPUT_SSR	SSR output
0x04	OUTPUT_DTR	Double Poll Relay
0x08	OUTPUT_DCP	DC Pulse output
0x10	OUTPUT_ANG	Analog Output
0x20	OUTPUT_IANG	Isolated Analog Output

Output Polarity		
0	NORMALLY_OPEN	Contacts OPEN until activated
1	NORMALLY_CLOSED	Contacts CLOSED until activated

Output Type		
0	VOLTAGE	Voltage range
1	CURRENT	Current range

Output Mode		
0	OUTPUT_OFF	Output maintained in OFF state
1	OUTPUT_PID	Output control by PID control function
2	OUTPUT_ON_OFF	Output controlled by ON-OFF control function
3	OUTPUT_RETRANSMISSION	Output retransmits the scaled process variable

Platinum Modbus Interface

4	OUTPUT_ALARM_1	Output set by ALARM 1 state
5	OUTPUT_ALARM_2	Output set by ALARM 2 state
6	OUTPUT_RAMP_EVENT	Output set by Ramp & Soak RE.ON control bit
7	OUTPUT_SOAK_EVENT	Output set by Ramp & Soak SE.ON control bit

Output Process Range		
0	OUTPUT_0_10	0-10 Vdc
1	OUTPUT_0_5	0-5 Vdc
2	OUTPUT_0_20	0-20 mA
3	OUTPUT_4-20	4-20 mA
4	OUTPUT_0_24	0-24 mA

3.1.9 Annunciator Parameters

Annunciator Mode		
0	ANNUN_NONE	Disable Annunciator
1	ANNUN_ALARM_1	Annunciator activated by Alarm 1
2	ANNUN_ALARM_2	Annunciator activated by Alarm 2
3	ANNUN_OUTPUT_1	Annunciator activated by Output 1
4	ANNUN_OUTPUT_2	Annunciator activated by Output 2
5	ANNUN_OUTPUT_3	Annunciator activated by Output 3
6	ANNUN_OUTPUT_4	Annunciator activated by Output 4
6	ANNUN_RE_ON	Annunciator activated by RE.ON bit
8	ANNUN_SE_ON	Annunciator activated by SE.ON bit
9	ANNUN_RAMP_ACTIVE	Annunciator activated during any RAMP cycle
10	ANNUN_SOAK_ACTIVE	Annunciator activated during any SOAK cycle

Platinum Modbus Interface

3.1.10 Communication Parameters

Protocol		
0	PROTOCOL_OMEGA	Omega Protocol
1	PROTOCOL_MODBUS	Modbus Protocol

Data Flow (Omega Protocol)		
0	DATA_FLOW_COMMAND	Interactive command mode
1	DATA_FLOW_CONTINUOUS	Continuous mode

Separation Character (Omega Protocol)		
0	SEPARATION_SPACE	Use <space> character between records
1	SEPARATION_CR	Use <CR> between records

Modbus Protocol (Modbus Protocol)		
0	MODBUS_RTU	ASCII formatted records
1	MODBUS_ASCII	RTU formatted records
2	MODBUS_PDU	PDU formatted records

Serial Mode		
0	SERIAL_RS232	
1	SERIAL_RS485	

Serial Baud Rate		
0	BAUD_300	
1	BAUD_600	
2	BAUD_1200	
3	BAUD_2400	
4	BAUD_4800	

Platinum Modbus Interface

5	BAUD_9600	
6	BAUD_19200	
7	BAUD_38400	
8	BAUD_57600	
9	BAUD_115200	

Parity		
0	PARITY_NONE	
1	PARITY_ODD	
2	PARITY_EVEN	

Data Bits		
0	BITS_7	
1	BITS_8	

3.1.11 Excitation Parameters

Excitation		
0	EXCITATION_0_VOLTS	
1	EXCITATION_5_VOLTS	
2	EXCITATION_10_VOLTS	
3	EXCITATION_12_VOLTS	
4	EXCITATION_24_VOLTS	

3.1.12 Calibration Parameters

Calibration Mode		
0	CAL_NONE	
1	CAL_1_POINT	
2	CAL_2_POINT	

Platinum Modbus Interface

3	CAL_ICE_POINT	
---	---------------	--

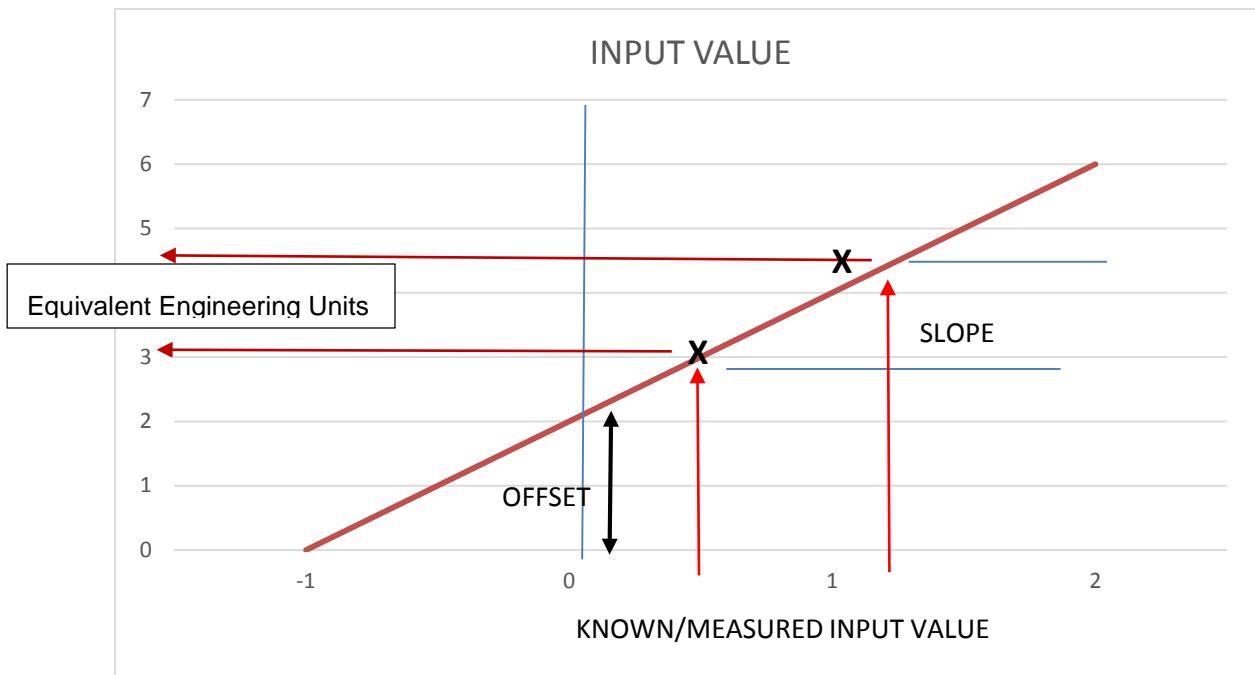

3.1.13 Input / Output Scaling

Scaling operations allow translating source (input) signals to scaled output signal using a linear translation defined by a SLOPE (or gain) and an OFFSET. As shown below, (X1,Y1) and (X2,Y2) define two points on a line that has a certain SLOPE and OFFSET. Knowing the SLOPE and OFFSET allows determining the OUTPUT value for any given INPUT value using the equation:

$$\text{Output} = \text{Input} \times \text{SLOPE} + \text{OFFSET}, \text{ where}$$

$$\text{GAIN} = (Y_2 - Y_1) / (X_2 - X_1)$$

$$\text{OFFSET} = Y_1 - (\text{GAIN} \times X_1).$$

If $(X_2 - X_1) == 0$, the GAIN is set to 1 and the OFFSET is set to 0.

WARRANTY/DISCLAIMER

OMEGA ENGINEERING, INC. warrants this unit to be free of defects in materials and workmanship for a period of **61 months** from date of purchase. OMEGA's WARRANTY adds an additional one (1) month grace period to the normal **five (5) year product warranty** to cover handling and shipping time. This ensures that OMEGA's customers receive maximum coverage on each product.

If the unit malfunctions, it must be returned to the factory for evaluation. OMEGA's Customer Service Department will issue an Authorized Return (AR) number immediately upon phone or written request. Upon examination by OMEGA, if the unit is found to be defective, it will be repaired or replaced at no charge. OMEGA's WARRANTY does not apply to defects resulting from any action of the purchaser, including but not limited to mishandling, improper interfacing, operation outside of design limits, improper repair, or unauthorized modification. This WARRANTY is VOID if the unit shows evidence of having been tampered with or shows evidence of having been damaged as a result of excessive corrosion; or current, heat, moisture or vibration; improper specification; misapplication; misuse or other operating conditions outside of OMEGA's control. Components in which wear is not warranted, include but are not limited to contact points, fuses, and triacs.

OMEGA is pleased to offer suggestions on the use of its various products. However, OMEGA neither assumes responsibility for any omissions or errors nor assumes liability for any damages that result from the use of its products in accordance with information provided by OMEGA, either verbal or written. OMEGA warrants only that the parts manufactured by the company will be as specified and free of defects. OMEGA MAKES NO OTHER WARRANTIES OR REPRESENTATIONS OF ANY KIND WHATSOEVER, EXPRESSED OR IMPLIED, EXCEPT THAT OF TITLE, AND ALL IMPLIED WARRANTIES INCLUDING ANY WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE HEREBY DISCLAIMED. LIMITATION OF LIABILITY: The remedies of purchaser set forth herein are exclusive, and the total liability of OMEGA with respect to this order, whether based on contract, warranty, negligence, indemnification, strict liability or otherwise, shall not exceed the purchase price of the component upon which liability is based. In no event shall OMEGA be liable for consequential, incidental or special damages.

CONDITIONS: Equipment sold by OMEGA is not intended to be used, nor shall it be used: (1) as a "Basic Component" under 10 CFR 21 (NRC), used in or with any nuclear installation or activity; or (2) in medical applications or used on humans. Should any Product(s) be used in or with any nuclear installation or activity, medical application, used on humans, or misused in any way, OMEGA assumes no responsibility as set forth in our basic WARRANTY/DISCLAIMER language, and, additionally, purchaser will indemnify OMEGA and hold OMEGA harmless from any liability or damage whatsoever arising out of the use of the Product(s) in such a manner.

RETURN REQUESTS/INQUIRIES

Direct all warranty and repair requests/inquiries to the OMEGA Customer Service Department. **BEFORE RETURNING ANY PRODUCT(S) TO OMEGA, PURCHASER MUST OBTAIN AN AUTHORIZED RETURN (AR) NUMBER FROM OMEGA'S CUSTOMER SERVICE DEPARTMENT (IN ORDER TO AVOID PROCESSING DELAYS).** The assigned AR number should then be marked on the outside of the return package and on any correspondence.

The purchaser is responsible for shipping charges, freight, insurance and proper packaging to prevent breakage in transit.

FOR WARRANTY RETURNS, please have the following information available **BEFORE** contacting OMEGA:

1. Purchase Order number under which the product was PURCHASED,
2. Model and serial number of the product under warranty, and
3. Repair instructions and/or specific problems relative to the product.

FOR NON-WARRANTY REPAIRS, consult OMEGA for current repair charges. Have the following information available **BEFORE** contacting OMEGA:

1. Purchase Order number to cover the COST of the repair,
2. Model and serial number of the product, and
3. Repair instructions and/or specific problems relative to the product.

OMEGA's policy is to make running changes, not model changes, whenever an improvement is possible. This affords our customers the latest in technology and engineering.

Where Do I Find Everything I Need for Process Measurement and Control? OMEGA...Of Course! *Shop online at omega.comSM*

TEMPERATURE

- Thermocouple, RTD & Thermistor Probes, Connectors, Panels & Assemblies
- Wire: Thermocouple, RTD & Thermistor
- Calibrators & Ice Point References
- Recorders, Controllers & Process Monitors
- Infrared Pyrometers

PRESSURE, STRAIN AND FORCE

- Transducers & Strain Gages
- Load Cells & Pressure Gages
- Displacement Transducers
- Instrumentation & Accessories

FLOW/LEVEL

- Rotameters, Gas Mass Flowmeters & Flow Computers
- Air Velocity Indicators
- Turbine/Paddlewheel Systems
- Totalizers & Batch Controllers

pH/CONDUCTIVITY

- pH Electrodes, Testers & Accessories
- Benchtop/Laboratory Meters
- Controllers, Calibrators, Simulators & Pumps
- Industrial pH & Conductivity Equipment

DATA ACQUISITION

- Data Acquisition & Engineering Software
- Communications-Based Acquisition Systems
- Plug-in Cards for Apple, IBM & Compatibles
- Data Logging Systems
- Recorders, Printers & Plotters

HEATERS

- Heating Cable
- Cartridge & Strip Heaters
- Immersion & Band Heaters
- Flexible Heaters
- Laboratory Heaters

ENVIRONMENTAL MONITORING AND CONTROL

- Metering & Control Instrumentation
- Refractometers
- Pumps & Tubing
- Air, Soil & Water Monitors
- Industrial Water & Wastewater Treatment
- pH, Conductivity & Dissolved Oxygen Instruments
